Current position

Apr 2016 – present **Research engineer.** Microsoft Research (Cambridge, United Kingdom).

Current research interests *Computer vision/Graphics.* How can we enable machines to perceive and interact with humans? My research focuses on learning realistic models of human body shape and appearance, and using them to fit depth and RGB data. I am also interested in exploring uses of 3D human body models in medical (namely, dermatological) applications.

Past research interests *Networks.* Design and theoretical analysis of routing algorithms for delay-tolerant networks. Analysis of interaction dynamics in social networks.

High-performance computing and large dataset algorithms. Development of *psort*, a C++ sorting library for large datasets on external memory.
