1 Real-time Sign Language Letter and Word Recognition from Depth Data - Supplemental Material

In the following, we present the ASL finger alphabet and word lexicon that have been used in the paper. Furthermore, we provide the images of Figures 4, 5, 6, and 7 in high resolution.

1.1 ASL Finger Alphabet Letters

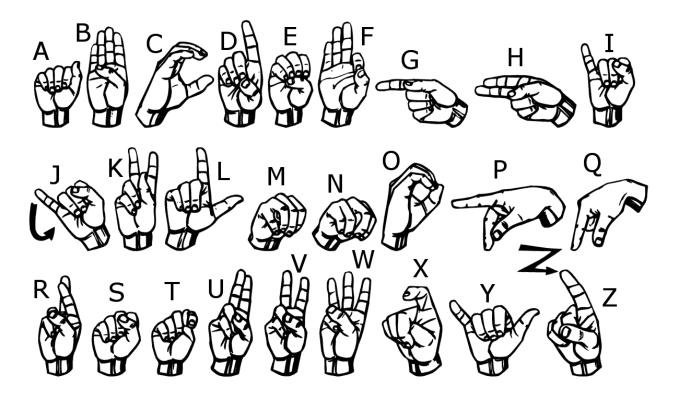

Figure 1: Symbols of the ASL finger alphabet.

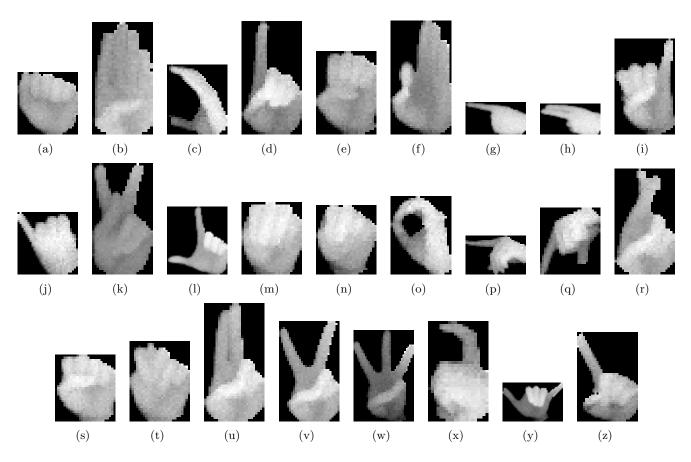

Figure 2: Depth images of the of the ASL finger alphabet gestures. The dynamic gestures "J" and "Z" are represented by static equivalents. It is the end pose for "J" and the start pose for "Z" of the respective dynamic gesture. The images are presented as seen by a person performing the gestures in front of a mirror. Note that many gestures look very similar due to the low resolution of the depth sensor.

1.2 Tested Words and Lexicon of Known Words

all	are	back	behaviour
blue	bravo	but	chalk
clothes	complex	crack	day
digestion	drain	eight	expansion
feeling	floor	frequent	gold
hanging	help	humour	invention
knee	let	living	market
mind	muscle	nine	offer
out	pencil	point	prison
put	read	respect	rough
screw	seven	sign	smile
soup	station	straight	swim
the	thunder	trade	us
waste	wheel	wire	yes

Table 1: Set of 56 words used to test the word recognition system. They have been selected randomly from the lexicon of 900 words known to the system.

about	able	accept	account	acid	across	act	addition	advertisement	after
again	against	agreement	air	alcohol	all	almost	among	amount	amusement

Table 2: Lexicon of the 900 words available to the word recognition system.

1.3 Figures of Section 4 (Experiments)

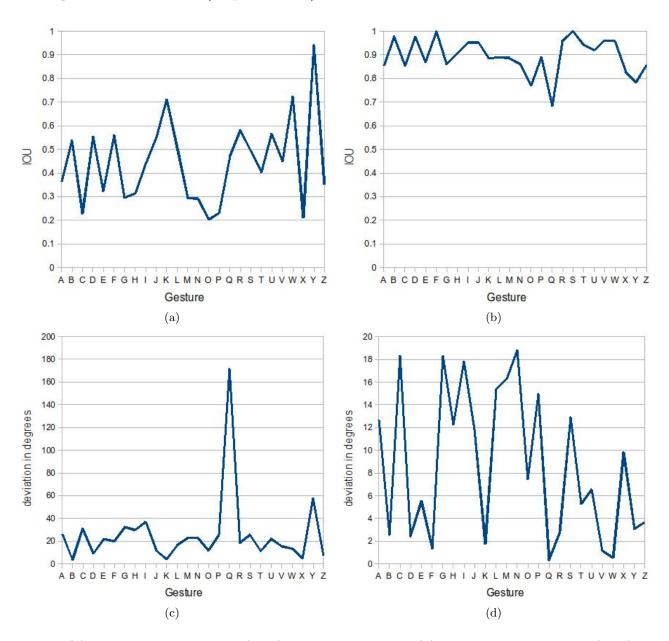

Figure 3: (a) Segmentation accuracy (IOU) after 10 iterations. (b) Segmentation accuracy (IOU) after 50 iterations. (c) Hand orientation error after 10 iterations. (d) Hand orientation after 50 iterations.

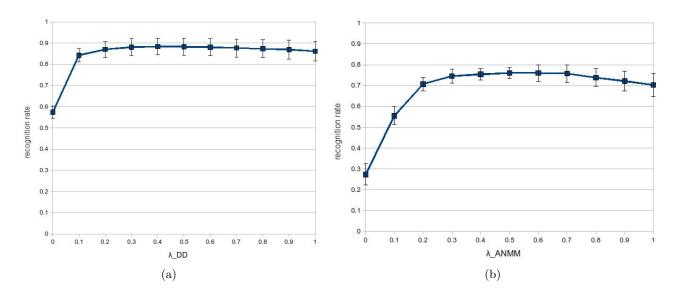

Figure 4: (a) Single-user: Average gesture recognition rates for different combinations of the DD and ROT classifiers, achieved by varying $\lambda_{\rm DD}$ and $\lambda_{\rm ROT}=1-\lambda_{\rm DD}$. (b) Multi-user: Average gesture recognition rates for different combinations of the ANMM and ROT classifiers.

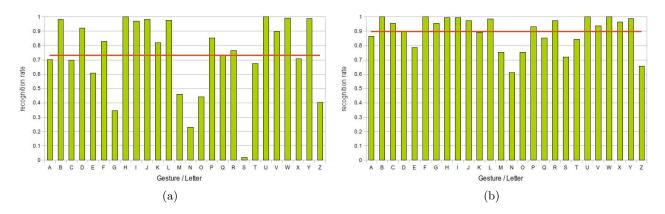

Figure 5: Letter recognition rates showing differences between the individual letters ($\lambda_{\text{ANMM}} = \lambda_{\text{ROT}} = \lambda_{\text{DD}} = 0.33$). (a) In the multi-user setup, some letters like 'S' are often not correctly recognized. (b) In the mixed setup, the recognition rates of the letters that were difficult to classify in the multi-user setup are significantly improved.

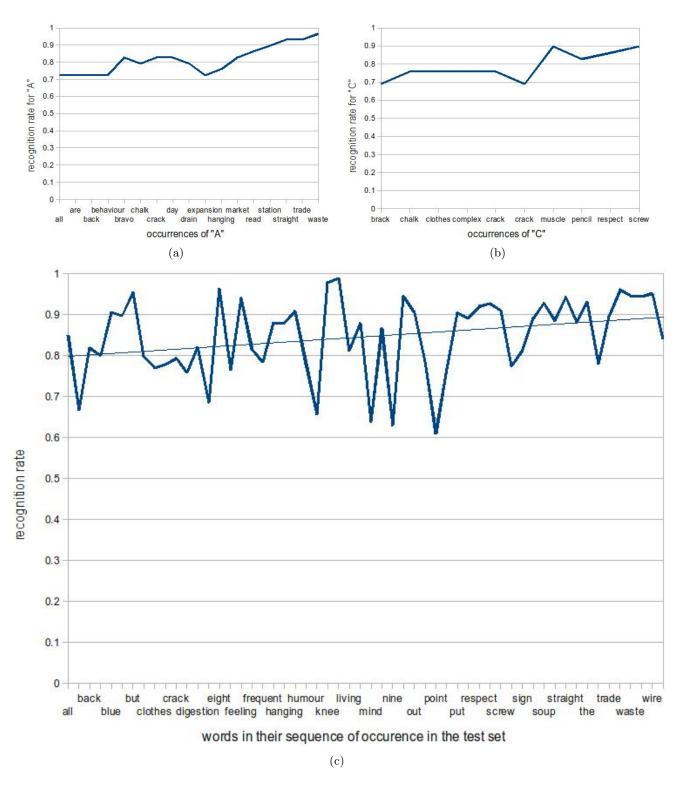

Figure 6: Due to the codebook updates, the letter and the word recognition improves over time. (a) Recognition rates for letter 'A'. (b) Recognition rates for letter 'C'. (c) Average letter recognition rates per word. The linear trend line increases over time.
